Hi Carmine,

I mentioned that I would connect today based on our conversation last week. Thank you for forwarding the email material last week. It provided an opportunity to review our program protocols for the Drain Water Heat Recovery Program.

As I mentioned last week, our programs are not intended to promote one specific brand of product, but simply to promote energy efficiency benefits that may be of value to our natural gas customers. Products are required to meet all applicable laws and regulations. Ultimately, it is end use customer has the final choice of product or installer.

I appreciate your effort in keeping us in the loop on this issue. If you are aware of other products that meet our program objectives, please do not hesitate to let us know. We are always in the process of screening new ideas.

Enbridge Gas Distribution Announces New Energy Saving Drain Water Heat Recovery Program for Home Builders

OCT 8, 2009 - 12:50 ET

TORONTO, ONTARIO--(Marketwire - Oct. 8, 2009) Today Enbridge Gas Distribution (TSX:ENB) (NYSE:ENB) announced that it is offering a new energy saving Drain Water Heat Recovery Program that will help home builders make new homes more energy efficient.

The Power-Pipe[®] units, developed and manufactured by RenewABILITY Energy Inc. of Waterloo, Ontario, make it possible to recover the waste heat from the outgoing drain water and reuse it by heating the incoming cold fresh water â€ they are available in 48" and 60" lengths. The Power-Pipe[®] is a heat exchanger that has several sets of copper coils tightly wrapped around a copper drain pipe.

Here's how it works:

- As warm to hot water flows down the drain it heats the Power-Pipe[®] before leaving the house.
- At the same time, cold fresh water coming into the house passes up through the Power-Pipe's outer coils and is heated.
- The result is that a water heater does not have to work as hard, so energy costs go down. The 60" unit, for example, will help reduce water heating costs by up to 35% according to Natural Resources Canada.
- Drain water never mixes with the fresh water it is only the heat that is transferred.

Incorporating this technology into new homes will help reduce the energy required to heat water, which results in ongoing savings on water heating costs and reduced greenhouse gas emissions.

"Offering innovative energy efficiency solutions is one way Enbridge brings added value to our partners in the builder community," said Arunas Pleckaitis, Vice President, Enbridge Gas Distribution. "This program is a win-win builders can offer their home buyers more energy efficient homes and home buyers can feel good about reducing their energy costs and helping the environment."

Through Enbridge Gas Distribution's Drain Water Heat Recovery Program, 860 Power-Pipe[®] units are available for free to new home builders until December 31, 2009, with a limit of one free unit

per address.

Home builders can participate in Enbridge's new Drain Water Heat Recovery Program, which is recognized by the ENERGY STAR® for New Homes Program, by contacting their rental water heater representative.

Between 1995 and 2008, Enbridge Gas Distribution's energy efficiency programs reduced natural gas use by 4.4 billion cubic metres and carbon dioxide emissions by 8.3 million tonnes. That is equivalent to providing natural gas service to about 1.4 million homes for one year or removing 1.8 million cars from the road for a year.

Enbridge Gas Distribution Inc. has a 160-year history and is Canada's largest natural gas distribution company. Enbridge Gas Distribution is owned by Enbridge Inc., a Canadian-based leader in energy transportation and distribution. Enbridge Gas Distribution and its affiliates distribute natural gas to about 1.9 million customers in Ontario, New York State, New Brunswick and southwestern Quebec.
